## Welcome

Welcome to The Pond Company. Our aim is to capture scenes from nature and reconstruct them for our clients. Our water features aim to create the illusion that they have been created by nature and blend seamlessly with their surroundings. Each individual rock is hand picked from the quarry, ensuring all the components of the feature can be harmoniously blended. Our construction methods are designed in such a way as to seemingly disappear, hidden by the use of natural rock and gravel.

Man's love affair with water is something that has endured across the countries from the oceans and rivers to eventually our own personal space. In the garden water is not only needed for the survival of plant life but in its own right can be a thing of great beauty and used to create many different effects.

Building award winning water gardens for over 15 years. Accolades include: Southport & Tatton. Let us create a space that is as unique as you are and prepare for an experience that is as unique as you are and prepare for an experience that will last a lifetime. Our water features are created using natural stone, pebbles and gravel to give a natural look which can blend in seamlessly with the surroundings of a traditional garden so that it looks like part of the landscape or can create a stark contrast in a more contemporary setting.

Different effect can be created from your feature with the use of a number of pumps depending on the size of the feature, this can create a flow ranging from a slight trickle to a powerful cascade of water that create an audible as well as visual impact. We also create hard landscaping designs and are Marshalls Registered as well as offering planting services, design and construction.

## Services

**Design** Including site visit and initial consultation regarding position & size of venture.

**Ponds** Can be stand alone or incorporate water falls, streams and cascades, maybe even linking more than one pond.

**Waterfalls** Can be used to great effect falling into a pond, flow rate can be varied from a small background trickle to an avalanche of water depending on your mood. Waterfalls can also be stand alone into a pebble area making them safer for children.

**Cascades** Cascades can be used to create movement and sound in the garden from a safe shallow bubbling to a great torrent.

**Streams** Can link one area of a garden to another or alternatively can create a natural barrier dividing the garden into separate area, they can also be incorporated into ponds and waterfalls.

**Hard Landscaping** In addition to our traditional building expertise and flair for rock and water creations, we are also able to accommodate all aspects of more modern landscaping. We believe that quality is all-important, and as such specify high quality materials throughout all of our designs. As approved Marshalls contractors our quality and methods of work have been independently verified., and when allied with a Marshalls product come complete with a ten year guarantee.
